In each box mark the relationship as follows: Positive relationship: where one project helps another (is compatible with) or supports the other: strong: ++, slightly: + Neutral relationship: 0 Negative relationship: where one project interferes (is not compatible) with the other: strong: --, low: -.

Implications Where strong positive or negative relations are indicated, note them in a simple table like that below with a brief note of their implications for developing the project. This will provide an input to developing and appraising the project.

Strong relationship	What benefit or problem, and for whom?	Implication for strategy – how to maximize benefit or minimize risk
